Stanislav Poleheshko

IT Project Manager / Delivery Manager

IT Project & Delivery Manager and PMP®-certified professional with 4+ years of experience leading cross-functional teams across Unity, Flutter, Web3 and AI-agent environments. Proven track record managing complex blockchain integrations with the Golem Network, scaling digital ecosystems to 500k+ users, and architecting a production LLM customer-support agent resolving 68% of tickets autonomously. Technically literate in Python, SQL, HTML/CSS/JS and Dart to drive Agile delivery.

EXPERIENCE

AI Agent Architect

Reality Games · 03.2026 – 07.2026

- Designed and built Emily, an autonomous LLM-powered customer support agent covering three Reality Games titles (Landlord Tycoon, Landlord GO, Monopoly World), resolving 68% of player tickets with no human in the loop across 900+ live tickets processed.
- Architected a scenario-based routing system with nine dedicated handlers (billing, bug reports, account deletion, GDPR requests, cheating reports and more), built on Python and Flask, integrated with Zendesk API and Google Sheets.
- Implemented a vision-LLM pipeline to read Google Play receipts and validate app-store reviews without manual review.
- Built a full CS operations dashboard with live analytics, per-ticket reasoning traces, spreadsheet-backed to-do queues and a side-effect-free testing sandbox, secured with RBAC and mandatory 2FA.
- Optimized LLM cost through prompt caching and a data-driven knowledge-retrieval experiment, reducing per-ticket cost to \$28 per 10,000 tickets.

Project Manager / Delivery Manager

Reality Metaverse · 01.02.2025 – 28.02.2026

- Directed a cross-functional squad of 7 members (5 developers, 2 designers) to deliver multiple digital and blockchain-based initiatives in parallel.
- Led end-to-end delivery of Weather Challenge (Unity-based mobile game) from initial concept to a functional prototype over 10 months.
- Delivered an internal LiveOps event system for Reality Digital Assets, enabling community managers to autonomously create and manage 45+ events across 5 configurable formats.
- Led redesign of the platform's staking system and delivery of a VIP Staking feature, including a custom smart contract aggregating multi-source user assets for conditional access.
- Delivered a unified digital asset Store with a Packages feature enabling bulk NFT purchases in a single transaction (286 transactions, 1,205 NFTs sold).
- Coordinated external blockchain integration with Golem Network (ArkivDB) for NFT metadata storage, including a production fallback mechanism.

Social Media Team Leader / Business Developer

Reality Games · 01.02.2024 – 31.01.2025

- Built and structured the full social media ecosystem for Monopoly World, a licensed Monopoly IP-based mobile game
- Led social media and customer support teams, defining and monitoring KPI Tracking systems focused on user retention (D7-D90) and activity rates to optimize delivery processes.
- Planned timelines, priorities, and cross-team communication
- Identified growth opportunities and partnerships supporting product expansion

Social Media Specialist / Consultant

Reality Games · 23.05.2022 – 31.01.2024

- Managed and scaled multi-channel communities (500,000+ users) across Telegram, Discord, Twitter/X, Facebook, Instagram
- Supported product launches and live operations through community and campaign coordination
- Analyzed engagement data to improve performance and operational efficiency

Independent Project Manager

Digital Publishing · 07.05.2019 – 28.02.2022

Managed a cross-functional team delivering digital publishing websites monetized through Google AdSense, scaling traffic to 50k+ monthly unique visitors. Responsible for scope planning, task allocation, traffic acquisition strategy, budget control, and client communication.

SIDE PROJECT

Solo-developed personal finance tracker mobile app (ButGet)

Architected and developed a full-stack banking-based system using Flutter (Provider) and NestJS/PostgreSQL, featuring a multi-account structure to manage user expenses, incomes, and automated savings tracking.
